## QUALITY & ENVIRONMENTAL COMPANY POLICY

Nuova Gandiplast S.r.l. is fully aware that a responsible economic strategy, aimed at environmental issues arising from its activities, is essential for its success and that of its customers also in terms of: proper Quality management over the corporate purposes, the context of the organization and support of the strategic directions adopted.

Nuova Gandiplast S.r.l., by managing Environmental responsibility in a systematic way, aims to increase improvement of its "Environmental Performance" and "Quality Performance". This can lead to significant commercial and economic advantages, controlling and influencing products and services and satisfying, at the same time, the expectations of improvement and environmental protection relating to the territorial context in which the Company operates. By maintaining a regime of organization, sustainability and strategic support of Quality-environmental management the "Performance" will be highlighted through appropriate indicators.

Nuova Gandiplast S.r.l. is committed to a policy of continuous improvement of its SGAQ. By determining risks and opportunities, and planning related actions, the company will minimize, monitor and prevent (when technically possible and economically sustainable) any negative impact on the environment due to the company's activities. Nuova Gandiplast S.r.l. intends to achieve the above-mentioned goals through the following actions:

- Orienting all business activities towards achieving a positive, sustainable and circular business result;
- Identifying, planning and monitoring quality and environmental targets consistent with the business context and risks, making available the resources necessary to achieve them;
- Implementing, maintaining, periodically reviewing and improving an effective Environment-Quality Management System, which satisfies the requirements of the UNI EN ISO 14001:2015-UNI EN ISO 9001:2015 Standards and the applicable mandatory requirements;
- Ensuring operational continuity also in consideration of climate change and related impacts on the internal and external context of the organization;
- Ensuring that its activities are carried out in a way that satisfies compliance obligations, applicable requirements and any codes of practice, voluntary compliance and guidelines signed;
- Maintaining and increasing (in a sustainable manner) internal, European and global market shares;
- Maintaining and aiming to improve existing production efficiency;
- Implement every effort in organizational, operational, communication and technological terms to prevent pollution of water, air and soil, in particular through careful management of all activities related to the prevention of spills and contamination of the soil, the adequate use of additives, the correct functioning of the suction and filtration systems to protect air quality, the regular monitoring of water quality;
- Working towards continuous improvement of the product and service offered with the aim of doing our best to satisfy the requirements and expectations of our stakeholders: customers, suppliers, employees, public bodies, banks, insurance companies and the local communities.
- Minimize and optimize the consumption of energy, water and waste production, monitoring and optimizing consumption by evaluating sustainable technical solutions that promote the efficient use of resources, and favoring, where possible, the recovery of waste produced, with particular attention to recycling, in line with the latest European directives on waste management hierarchy and "Circular Economy";
- Defining, updating, monitoring and improving, where possible and sustainable, the "Quality Performance" and "Environmental Performance" indicators, also integrated with non-financial reports and statements on a voluntary basis in compliance with the national and international laws and normative;
- Formalizing the activities described above in Environmental and Quality management programs, setting objectives and targets whose achievement is measurable and reconstructable, and assigning adequate resources for this purpose;
- Positively influencing the sensitivity of stakeholders regarding the added value of all activities in the recycling/regenerating chains, including proper waste collection and sorting, eco-design and the "End-of-Life" perspectives of goods and products;
- Ensuring that this Quality-Environment policy and the related management system are understood, implemented and maintained at all levels of the organization and that this system is supported by periodic and systematic updating, training, education and verification activities;
- Ensure that the Environment-Quality policy is documented, communicated at all company levels and available to interested parties;
